Preface: Overview of the Research

This research is intended to establish the foundation for further research in Historic Preservation.¹ My interest in Historic Preservation has begun to include the notion that the respect for and preservation of artifacts is only the easy part of the preservationist's (or architects) endeavor – the difficult part is becoming aware of, understanding and protecting those ways of life and values which the artifact symbolizes. This research will focus on the means available to enable that understanding and protection.

The research builds upon processes and products of previous course work. The final products (i.e., this document) include:

- a descriptive paper,
- a series of matrices which describe relations between protective and sustaining tools and the environment at different scales or levels of aggregation, and
- an annotated bibliography.

Intended by-products of the research include: a list of historic and contemporary cases which illustrate the process of preserving things in the larger sense; and a sense of where the HP research and thesis should go; and how the research can be organized so that it is clear and useful.

¹ I believe Architecture and Historic Preservation are both conceptually large enough subjects to map each other into themselves, i.e., they are closely intertwined and complementary, not hierarchical in relation. Like wise the architecture of buildings and the architecture of landscape are assumed to be complementary, and only separable in the abstract. Finally, I am also approaching the research with the notion that other subjects such as ecology, ecosystem management, or human cultural ecology are not subsets of any particular larger subject and in fact are closely intertwined with architecture and preservation.

I. Introduction: Intention and Progression

As noted in the preface, I have approached this research from the position that that the preservation of individual artifacts such as buildings, gardens, or other singular structures is worthy in and of itself, but akin to winning battles while losing the war. I believe that the larger scale structures in which the singular entities are found are not only worthy of preservation, but must be preserved if the smaller scale, singular structures are to have a meaningful existence. I think the larger scale cultural entities (LSCEs) are not preserved for at least two kinds of reasons.

- we are often simply not aware that those larger scale structures exist;
- when their presence is understood and their preservation desired, logistical difficulties make that preservation problematic.

In this research, I have looked for ways in which preservationists can participate and contribute to the protection and existence of these larger scale structures, and expected to find:

- ways to discover and see those larger structures, and understand their values;
- a framework for defining LSCEs;
- examples of both successful and unsuccessful preservation of LSCEs;
- the specific means of preserving LSCEs.

During the process of this research – while digging through sources to see what they might say about the subject, while delving in their bibliographies for related sources – I began to find some bedrock, some issues which underlay preservation, but are often not stated

explicitly.² One issue is the relation of preservation to conservation (in the broader sense). Another is the relation of preservation to human cultural ecology as well as ecology in its more accepted meaning. The moral premises and other subtexts which underlie preservation were often unspoken, but could be read between the lines.

These fundamental issues led to the expansion of the bibliography, as I began to examine the notions of place, of conservation and the history of conservation, and the nature of human culture. The annotated bibliography therefore contains many “non-preservation” sources (i.e., sources which do not directly address the preservation of artifacts).³ Yet despite the tenuous connection between these sources and preservation, the presence of these sources is important because the large scale cultural entity is not a singular artifact, and is in some ways an invisible thing which might exist more as an idea or process than a physical thing. Which brings us to the problem of defining the large scale cultural entity....

Definitions and Other Circumlocutions

The large scale cultural entity (as I am defining it) exists at a scale larger than an individual object or artifact. It has some value to the culture at large - either to the human culture with which it co-exists, or to the ecosystem of which it is part. As noted above, it may be more akin to a process or idea, and hence somewhat invisible: what we notice is not

² Much of the actual preservation literature seems to focus upon technique and process, and often leaves the underlying motivation unexamined.

³ We preservationists seem to be rather clear about what must be done to save an object, but much less clear about if or how we should attempt to preserve a process or a way of life. For that I have had to look to agricultural and ecosystemic examples for analogous methods.

the thing itself, but like the wind blowing leaves, we see it manifest in the appearances, lives and activities of the things it affects.

This definition is meant include such classic preservation milieus as parks, districts, and landscapes. But it is also meant to include ways of life which have evolved as people learn to live in a certain place and time; to include intermittent and recurring phenomena, such as the vernal ponds of north central California; and even be part of larger entities – like forests, deserts and even individual bioclimatic regions. The definition is also meant to include individual sites, processes or experiences which are unique (and therefore irreplaceable) – a gold medal trout stream, a stand of plants, rock outcropping in a city park, a passenger train. In short, these are entities which help a culture understand where, when and how it relates to its place on the earth and in time.

II. The Descriptive Matrices

The matrices are intended to lend consistent form to comparisons and descriptions of the major tools used to save large scale cultural entities (LSCEs) available to the preservationist. The central organizational feature are notations of impacts of the tools (and their variants) upon classes of related objects at different scales.

For example, the state park may exist at an extremely local scale; the Darlingtonia unit of the Oregon State Park system (located near Florence) is a small land holding which fits in this scale. It resides entirely within a particular microclimate of a single watershed in a single bio-climatic region, and in a single geo-political municipality. Yet its unique character has much more than a local importance, as these *Darlingtonia* plants themselves are unique not only in this region, but

possibly do not exist in other similar bio-climatic regions.

The vernal ponds of north central California, in contrast, are not singular or unique individuals, as the Darlingtonia site is. However, they exist only seasonally, and may exist in several different watersheds located in several different geo-political municipalities and a different political climate. While the Darlingtonia site is an easily recognizable singularity (and thereby relatively easy to define and protect), the vernal ponds are not as noticeable (especially given their temporary and recurrent nature) and are more difficult to protect than the *Darlingtonia* site.⁴

In all probability, these two cultural resources *should* be protected by those tools and processes appropriate to their nature. But what are the appropriate tools? In the case of the Darlingtonia site, its limited extent and singularity made inclusion in the state park system fairly logical and effective. But the dispersed and seasonal nature of the vernal ponds, and the differing political climates in the various jurisdictions make state park status a less viable option. How then can the ponds be protected? The major tools for preserving contexts (as opposed to individual artifacts include:

Historic Districts

Land Trusts

Cultural Landscapes (especially Rural Historic Districts

Other Tools: Parks, etc.

All of these tools, or approaches to conserving large scale cultural resources will be described in similar matrices, with sources noted.

⁴ Vernal ponds form when rainy season waters collect in clay basins. As the ponds evaporate, wildflowers bloom in successive concentric rings at the perimeter of the ponds. The exclusive domain of more than 60 native plant species found nowhere else, less than 5 percent of the original range of these pools remains intact. See Figure 1.

III. The Annotated Bibliography

In certain respects, the annotated bibliography forms the core of this research. It includes not only those sources upon which the matrices and descriptive paper depend, but also those which expand upon or form the basis for the primary sources.

Masanubo Fukukua⁵ has noted that a thorough understanding of growing food requires not only the insights of plant biologists, soil experts and agronomists, but poets as well, to describe the qualities of dew on spiderwebes sparkling in the sunlight. The sources therefore include not only scholarly work focused on preservation or landscape, but works of fiction, poetry and visual images which help describe the nature of landscape, culture or sense of place.

The format of the bibliography differs from expected research formats by including expanded bibliographic information, such as one might expect in a card catalog. I feel this information is important to include for two reasons: it describes the source materials in a succinct, standardized form, and helps refer to other related sources of information.

The annotated sources are arranged in alphabetical order, and includes sources which have not yet been annotated, but are related and worthy of inclusion. In this manner, I am trying to respect the notion that this bibliography is not a finished product, but a working document in a state of continual and incremental revision.

Salient Issues

The problematic areas impeding the conservation of landscapes and ecosystems occur in the many realms. One of the most important comes out of the deep-seated notions of justice, particularly that of possession is nine tenths of the law. Who owns land and what kind of tenure they hold, and what they do with it are of paramount concern. The use of land is also tied intimately to concepts of constitutionally protected property rights. Property rights in turn tie into fiduciary concerns. The use of lands also brings the spectre of public relations concerns, with the larger land-controlling organizations traditionally regarded as having responsibility in inverse proportion to their size and perceived power, and the individual landholder having responsibilities with concomitantly lesser power.

Conservation law is also in a state of flux,⁷ and recently interpretation and enforcement has been subject to political and ideological control instead of professional.⁸ And finally public agencies tend to view their spheres of influence as proprietary, threatened and requiring protection and defense, even at the risk of not cooperating with other agencies.⁹

The combination of all these factors create a difficult milieu for conservation in general, but perhaps the issues of deepest concern are those which are never reexamined or well defined. By contrast, the information regarding management of resources (whether at singular or complex levels of aggregation) is well researched and relatively

available.¹⁰

Mission and Practice of Public Agencies

The farmer, poet and essayist Wendell Berry contends that organizations cannot adequately enact relationships between humans and the world because such interaction always occurs at a personal level in specific, perceptible and substantial ways, while the organization can only interact with the environment through individuals and at an abstract level.¹¹ The interaction does occur at a community scale, because communities are composed of individuals living on or with a given, specific piece of land, and are the visible elements of a culture which has (presumably) a vital and on-going (sustainable) interaction with the landscape or ecosystem.¹² Managing the land in this kind of culturally responsive way accepts the anthropocentric and utilitarian aspects of the land ethic within the context of maintaining resources which ensure the well-being of humans because the other (necessary) elements of the system are also assured of well-being in the most dynamic and comprehensive senses.¹³

Management

The management of cultural resources - whether a structure, a landscape or an ecosystem take place in system of human-produced

¹⁰ The sources for this research paper illustrate this: the literature heavily represented practical issues in management, but information regarding the underlying assumptions of conservation was harder to find; often it was only alluded to in passing.

¹¹ Berry, 1976, p. 27. He further states that the conservation movement has never addressed this dichotomy adequately and does not deal effectively with "the impact of daily living upon the sources of daily life." To some extent this is still true: we seldom consider how the cornflakes we eat may be the result of poor (or good) farming practices, result of poor (or good) farming practices. In a similar manner, the auto commuter has a hard time appreciating the fact that greenhouse gases are accumulating while being cut off at the exit ramp.

RECONCILIATION

In the most basic analysis, saving cultural landscapes or ecosystems will depend on not only knowing that people are part of the landscape, but will protect it best from a position of familiarity, respect, and even affection.

The foliage opens like a cloud.
At rest high on the valley side,
Silent, the man looks at the loud
World: road and farm, his daily bread,

His beasts, his garden, and his barns,
His trees, the white walls of his house,
Whose lives and hopes he knows. He yearns
toward all his work has joined. What has

He by his making made but home,
A present help by passing grace
Allowed to creatures his name
Here in this passing time and place?

- Wendell Berry, 1989¹⁹

Figure 1
General Organization of Scales and Tools

DESCRIPTIVE MATRICES

INTRODUCTION

Tools for historic preservation, landscape conservation and sustainable development have some common elements, some complementary aspects and some areas of conflict. In the matrices which follow, the tools (methods of achieving goals) will be placed in relation to each other according to how they are presented in the literature. The headings and subdivisions of the matrices are based upon my understanding of where the tool would be appropriately employed, and integrate both socio-political and geographic categories.

GENERAL ORGANIZATION

Protective strategies are mostly found at national and smaller levels of aggregation. This is especially notable in the sustainable development literature, which holds that sustainability is a function of locally specific attitudes, understandings and interactions.¹ Most tools or methods of protecting cultural resources are applied at specific scales. For instance, the Land Trust is most often applied at a scale which is geographically smaller than the watershed or community / city scale, but can include landscapes,

¹ For instance, global sustainability seems to be related to the total effect of many locally specific interactions; the cumulative effect may not be zero-sum in nature, i.e., the effect may be more or less than the sum of its parts. See Berry, Botkin, & Grumbine for specific explanations.

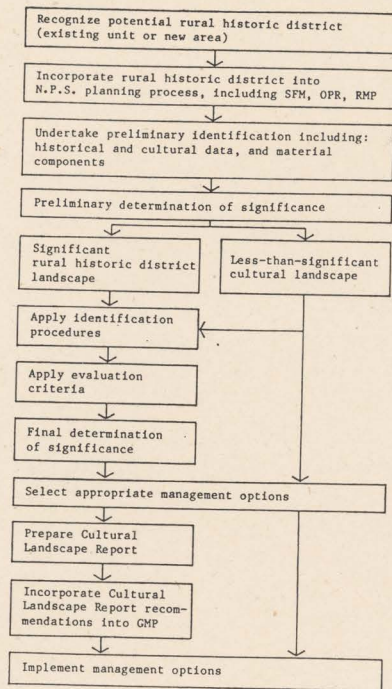

Figure 1: Rural historic district planning process.

Figure 2
Rural Historic Districts (Cultural Landscapes)

buildings and other structures. In Figure 1, most tools seem to be clustered in the middle of the matrix between the national and local scales in the regulatory realm. However, this is misleading, as most of the processes noted in that zone of Figure 1 address the protection of cultural resources only indirectly. The exceptions are the historic districts, which can include various kinds of resources, can cut across jurisdictional boundaries as well as scales.²

One of the most revolutionary aspects of the emerging sustainable development studies is the emphasis on bioregion, ecosystem, watershed and landscape as the preferred scales of definition. Yet few of the tools which apply to conservation are intended to function at those scales - and those that do are more concerned with life safety, health, or economic issues (e.g., the clean air and water acts) than with the preservation of culturally significant or ecologically significant entities (such as open space, agricultural practice, resource use, &c.). Furthermore, the tools specifically intended for conservation or historic preservation tend to focus upon individual artifacts or groups of artifacts, and not upon their larger physical and cultural context as a context of significance. Consequently, the artifacts may indeed be protected, but their (unprotected) context may be lost.³

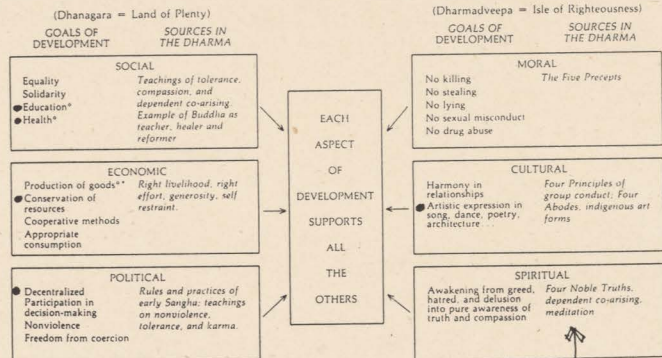

² See Melnick, et al, (1984) pp. 15-29.

³ To some degree this seems inevitable, especially since a given context may be dependant upon temporal qualities instead of physical attributes.

The Capacity Evaluation Model

During the Winter and Spring terms of 1993 and 1994, the Interdisciplinary Studies Program at the University of Oregon offered classes in Sustainability. The matrix at left is an outgrowth of one of those classes understandings. Its value is that it focuses upon social structures instead of resource bases for its organization. In a way, it is starting to look at a definition of 'social caring capacity' much the same way that natural resource evaluation defines 'carrying capacity.'

Figure 4
The Capacity Evaluation Model

*Modern development goals usually limited to these.
**Modern economic goals usually limited to these.

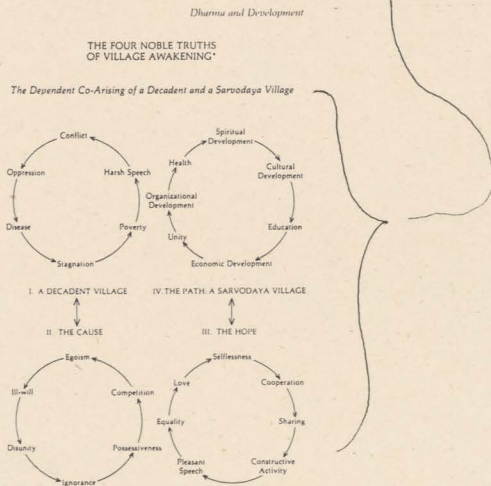

Figure 5
The Sarvodayan Sustainability Model

The Sarvodayan Model

Moving even further away from resource or other physiographic-based means of defining sustainability, the Sarvodayan model⁵ focuses upon social and cultural interaction as the starting point for sustaining life. Notice that the heavily bulleted items in the social, economic, political and cultural goals are those traditionally understood to be part of Historic Preservation goals and processes.

⁵ Macy, 1983. pp. 34, 35.

ANNOTATED BIBLIOGRAPHY

This bibliography includes sources which assist in refining and expanding the question of how historic preservation is related to sustainable development. The sources are divided into three sections: the first lists sources which apply directly to the subject; the second lists sources which are directly related but peripheral to, or supportive of the investigation (including theoretical or historical treatises); and the third list contains sources which may not be directly applicable but are provocative in formulating ideas, questions and attitudes. In addition, each of the three sections contains sources with annotations and without annotations. The decision to annotate or not was based mostly upon whether the source was unique for reasons of comprehensivity or clarity.

Disclaimer

This bibliography is not intended to be exhaustive, but to provide a basis for further expansion. As noted in the introduction, I am trying to respect the idea that this this bibliography is not a finished product, but a working document in a state of continual and incremental revision.

ANNOTATED BIBLIOGRAPHY

I. Primary Sources

This section includes sources which directly address aspects of either sustainable development or historic preservation.

Berry's Dream of the Earth is probably the most accessible of the texts which comprehensively explore the implications of sustainable development, and by extension, historic preservation. Middle class Euro-American anglos will probably understand its explanation of how the Semitic traditions of Judeo-Christian-Islamic religious insights can provide a context of stewardship at not only cultural scales, but landscapes and ecosystems as well.

Wendell Berry is arguably one of this eras most important conservation writers. While he is a poet, essayist and professor of literature, Berry is a farmer who uses horses to work the farm as a matter of principle and preference.

It is hard to choose any one book, essay or poem as representative or encompassing of his whole work, so I am listing all of the works with pertinent essay here. Berry is also included in the secondary and tertiary listing of sources because his writings work at many levels of specificity, though they are always provocative and stimulating.

In Berry's two essays on conservation in *Sex, Economy, Freedom and Community*, he speaks about people who are connected to their land and their community: what their attitudes are toward the land and each other. He expands upon previous essays¹ foci upon the necessity for systems of accounting and economics to recognize that externalizing costs to balance equations is not ethical and in fact harmful to the health of the land and the communities (virtually all humans) who depend on the land for their health.

In the first essay, "Conservation and Local Economy" Berry examines how the loss of the land-based local economy to the industrial / national economy has resulted in the destruction of the land and the local community. Analogies to NAFTA and the GATT are drawn. The relationship of personal choices and decisions to the economy and land is described. And finally the notion of a healthy community is defined, and community itself defined to include not only humans but the land and all the living things therein. He also details the relation between conservation / preservation of land and community within the framework of Jeffersonian participatory democracy:

"It is readily apparent that the economic forces that threaten the health of ecosystems and the survival of species are equally threatening to economic democracy and the survival of human neighborhoods." (p.15; and I bet the residents of south central LA would agree...)

In the essay "Conservation is good work," Berry talks about how conservation *is* work, and often hard work. The work includes knowing the local land and its history and health, and knowing the local human cultures history and health, too. He speaks of honoring what is there, even if not understood, and practicing humility because of what is not known.

Melnick, Robert, with Daniel Sponn, Emma Jane Saxe Cultural landscapes : rural historic districts in the national park system Park Historic Architecture Division, Cultural Resources Management, National Park Service, U.S. Dept. of the Interior, Washington, D.C. 1984.

Melnick, Robert, Stover, Stephen L., Sponn, Daniel C. Identifying, evaluating, and managing cultural landscapes in national parks Manhattan, Kansas : Dept. of Landscape Architecture, College of Architecture and Design, Kansas State University, 1982

The preface and introduction to Vanishing Farmland provides a concise overview of issues related to conserving agricultural and rural lands. The first two chapters set the legal / historical context, including specification of cultural and governmental concerns and attendant Constitutional limitations. Chapter 3 discusses means of agricultural land protection (and includes case studies), and chapter 4 presents and discusses a model ordinance. The references include case law as well as other primary and secondary sources.

Few landscapes are under the control of single-entity owners; even National Park lands often contain in-holdings or failing that, concessionaires or other parties with vested interests. The need to address many concerns of many parties to save landscapes is crucial. While many of those parties dismiss controls as unconstitutional, Redfield's book addresses a single means of addressing the issues at that most important yet abstract level. While the conclusions are at a general, non-specific level (as opposed to locally specific for a given landscape), the author does suggest that regulatory remedy be applied to specific agricultural districts rather than being universally applicable.

The main value of this book for the preservationist is its comprehensive examination of the legal issues and the model ordinance.² In this sense it provides a legal context for hands-on approaches to landscape conservation noted in Melnick, Foreman (Zonneveld) and others noted in this bibliography.

² In many ways, Vanishing Farmland complements the Legal Issues in Historic Preservation class taught here at the University of Oregon, which is focused upon issues, statutes and case law specific to Historic Preservation.

Runte's National Parks presents a good overview of some aspects of the conservation movement in the U.S. by focusing upon the creations and evolution of the National Parks and National Park System. Clearly brought out is the initial and still powerful notion that conservation is for either scenic values or for mixed use which primarily serves resource extraction. In the pivotal 6th and 7th chapters respectively entitled 'Complete Conservation' and 'Ecology Denied,' Runte describes how the Park Service examined ideas of preservation of ecological values, and why it continued to operate with the goal of development. Published in the mid-1980s, the text examines continued threats to individual park units by pro-development interests.

In some ways the National Parks are touchstones for attitudes toward conservation, and in particular for the attitude we have toward how we feel about preservation. While not ostensibly about either historic preservation or sustainable development, Runte's book touches upon aspects of both.

The chapters in Changing Landscapes are arranged in four parts. Part I introduces the field and relates historical aspects of landscape ecology studies. The second part presents case studies which examine specific functional processes and mechanisms operating at the landscape scale. Part III explores how the structure of landscapes change according to the interactions of natural processes and human interventions. The fourth part looks at how the spatial configurations of landscapes are maintained by short- and long-term planning processes.

In the preface, Zonneveld and Forman state that "Gazing into the future is both hazardous and our responsibility. ... Society gradually ponders larger areas, such as the globe, and longer time frames, such as sustainability. We can no longer view a local ecosystem or land use in isolation from the vertical and horizontal configurations of the surrounding landscape mosaic." (p. vi.) The protection and preservation of artifacts in the realm of historic preservation is certainly a land-use pattern which affect the surrounding landscape, and in the case of urban or suburban historic districts even constitute the landscape.

One of the best aspects of this book is the definition and explanation of the different scales in which natural processes and and human activities aggregate. The foundation for the watershed and landscape as the smallest integral unit is well developed, and provides a point of departure where the HP community could focus its medium-scale efforts (i.e., medium in the sense that it contains the artifact scale, and is contained within regional / state / national scales of effort). The final chapter, "Sustainable Landscapes," discusses the minimal variables necessary for attaining ecological integrity while accommodating human aspiration over a time frame of several human generations (probably the most common temporal scale of most historic preservation effort?).

Much of the literature on large scale conservation seems to be heading toward ecosystem scale management, and the most logical and understandable unit of the ecosystem seems to be the watershed.³ It makes some sense, then, to consider the primary feature of the the watershed - the water or stream. Of course, restoring a stream for trout has implications for other species and the human community as well, not limited to economic returns and more spiritual dividends. This well illustrated book talks about how to restore streams, giving case by case examples, and plenty of how-to illustrations. The streams described range from very small to river scale.

Despite its publication date of 1972, Platt's Open Space provides a good overview of how open space has been and is viewed, and what processes have shaped continue to shape open spaces. The introduction and first two chapters are most germane to the study of preserving open spaces; the remainder focuses upon case studies (which are interesting in themselves as narratives of process). As sustainable development includes the notions that open space has a value beyond that of individual or corporate economic exploitation, the sections on utopias in the first chapter and the differentiation between the economies of privately held land and publicly held land in the second are of particular interest.⁴

While a book on spiritual aspects of modernism and postmodernism may seem an unlikely inclusion for a bibliography concerned with preservation, it is germane in that Spretnak traces the roots of the crisis of modernity and discusses how the wisdom traditions of various cultures can resolve the issues and form a direction for actions and practice. As HP seems to also be claiming value for cultural entities and artifacts - often despite current ignorance or disdain for those historical values, Spretnak's arguments form a context within which the preservation of historic artifacts (or landscapes) and sustainable development can mobilize, complement each other, synergize and grow.

This book complements Jerry Manders In the Absence of the Sacred (in this bibliography) by discussing the attitude of non-western, non-cartesian societies to their land and cultures with a comprehensive focus which Mander trades for broad scope. It critiques some of the same subjects as Mander's book, such as the nature of industrialism and the implications of unqualified patterns of growth, in detail.

The arguments are well-documented and the endnotes comprehensive. Two appendices provide overviews of deconstructive postmodernism and feminist view of decon. The section on related readings is (topically) keyed to the chapters.

The essays in Dancing at the edge of the World which help develop ideas about culture and how we live in a place include:

- A Non-Euclidean View of California as a Cold Place to Be
- A Left-Handed Commencement Address
- Science Fiction and the Future
- Bryn Mawr Commencement Address
- Woman / Wilderness

One of the dangers of preservation would seem to be the risk of trying to create a utopia, especially when advocating the preservation of ways of life, ecosystems, small towns, transportation systems, whatever. In the essay "A Non-Euclidean View of California..." Le Guin examines the nature of utopias and what we desire as individuals and cultures. She starts with Robert C. Elliott's *The Shape of Utopia* and notes that utopia (literally "nowhere") is not inhabitable (like myths or museums?) but is nonetheless an attempt to live in the Golden Age. LeGuin looks at pre-Anglo human culture in California, and notes that the people knew the land completely, and that knowledge is now lost. Milan Kundera's *Book of Laughter and Forgetting* is cited to show that what we fear about death (loss of historic entities?) is not the loss of the future or even the present, but the loss of the past - our memories and remembrances which help us know who we are.

LeGuin gathers such disparate threads and weaves them into this fine paragraph which seems to hold both promise, assurance and warning for both the designer and the preservationist:

"If utopia is a place that does not exist, the surely (as Lao Tzu would say) the way to get there is by the way that is not a way. And in the same vein, the nature of the utopia I am trying to describe is such that if it is to come, it must exist already."

LeGuin also refers to A.T Wright's *Islandia* (rf. in this Biblio) as an example of an ecologically-based human culture, a utopia which has implications for our own relation to the world. Other essays deal with the critical nature of language, and how we choose to use it in describing our relation to our world, thereby influencing our perception. (Again, the observation changing the nature of the observed, as Einstein might have said...)

Le Guin, Ursula K., *Dancing at the edge of the world : thoughts on words, women, places* 1st ed.

_____ Always coming home

The preservationist occupies a seat of moral judgment (see Sax's Mountains without Handrails in this bibliography) and Manders' concern here is not only with the preservation and survival of native peoples, and concurrent survival and preservation of ecosystems and systems of democracy and culture which have the potential to enable humans to live sustainably, but also the processes which endanger sustainable cultural practices and attitudes. Along with Charlene Spretnak's States of Grace (also in this bibliography), Mander tries to expose the attitudes which form the unsustainable development paradigm. While Spretnak provides the more comprehensive exploration of the present paradigms theoretical and philosophical roots, Mander chooses to focus broadly upon how those attitudes find application in destroying cultures.

Mander's book (and Spretnak's, to a lesser extent) is valuable to the preservationist because it succeeds in demonstrating that the struggle to protect a single structure, or a landscape, or a human and/or a natural ecosystem does not take place in a vacuum, but is part of a larger conflict between the industrial paradigm which began 300 -500 years ago, and is now running into limits of growth, and an emergent paradigm of sustainability.

IV. Sources from Periodicals

This section includes sources which directly address aspects of either sustainable development or historic preservation. Unlike Part I (or parts II or III either) these sources are not books. They were selected with searches in electronic databases using a combination of keyword, subject, and author searches.

Beaumont, Constance Epton.

Title Quintessential recycling: historic preservation. by
Constance Epton Beaumont.

Appears in State Legislatures 1992, v18, n8, August, p30(3)

Descript. ill. (photograph, table)

Note Historic preservation offers economic as well as
environmental benefits. Aside from their visual appeal,
rehabilitated historic buildings and urban areas permit
states to develop heritage tourism programs that create
jobs and business opportunities for citizens and generate
sales, income and property revenues for government.
Realizing these potentials, several states have decided
to enhance the participation of private companies in the
preservation of historic buildings by providing
incentives, such as tax incentives, financial assistance
and relief from regulations.

Subject Historic buildings --Remodeling, restoration, etc.
Historic districts --Economic aspects.

Berg, Peter.
Title A metamorphosis for cities. (ecological development of cities) (includes related article) (City Lights) by Peter Berg.
Appears in The Amicus Journal 1992, v14, n2, Summer, p36(1)
Note The key to environmental transformation of cities is the launching of urban redevelopment programs that will require a collective effort among the citizenry. Some ideas include: building ecologically designed office buildings with energy- saving features, reducing motor vehicle volume by encouraging alternative means of transportation, promoting recycling practices, providing more open spaces for the public and

Berry, Wendell.

Title Decolonizing rural America. (revitalizing rural economies) (Column) by Wendell Berry.

Appears in Audubon 1993, v95, n2, March-April, p100(5)

Note Article type: Column.
Rural communities used to survive because residents were bonded by connection between land and economic survival. People created their own services which were supported in turn by the community. The ability to restore rural community life depends upon making the land a local resource.

Subject Rural development --Economic aspects.
Audubon

Berry, Wendell.

Title The pleasures of eating. (Not for Bread Alone: Writers on Food, Wine, and the Art of Eating) by Wendell Berry.
Appears in Antaeus 1992, n68, Spring, p12(7)
Note Eating can be pursued as a pleasure while at the same time acting in an environmentally responsible way. Food has its own politics, ethics and aesthetics which its consumers should be aware of. Eaters should remember that they are conducting an agricultural act rather than an alienated act of industrial consumption. To that end, eaters should grow and prepare as much of their own food as they can, know the origins and life cycles of their food, buy from local growers and eliminate the middleman from transactions.

Brower, David.

Title If I were President.... by David Brower.
Appears in Earth Island Journal 1992, v7, n2, Spring, p36(2)
Note A presidential agenda for acting on the issue of environmental restoration would involve convening a summit meeting to draft legislation on the matter and participated in by highly qualified individuals. The agenda would also include the establishment of a National Recovery Service, a federal Restoration Finance Corp and a President's Council on Environmental Restoration. To finance the restoration program, the erstwhile defense budget would be channeled toward more pressing social concerns. Congress should also prioritize the passing of economic conversion laws.
Subject Presidents --Environmental policy.
Environmental policy --Planning.

Lowe, Justin.

Title Is sustainable development sustainable? by Justin Lowe and David Brower.
Appears in Earth Island Journal 1992, v7, n3, Summer, p4(2)
Descript. ill. (photograph)
Note Environmentalists agree that the concept of sustainable development means more than just regulated economic growth. The concept has not been fully realized because of the apparent resource over-consumption of industrialized countries and the continued misery of Southern nations. The US in particular has not provided adequate health and educational assistance to the South. A better quality of life is the only justifiable reason for economic development.
Subject Sustainable development --Analysis. Environmental policy --Planning. Economic development -- Environmental aspects.
Alt. Author **Brower, David.**

Burbank, Douglas W.

Title Characteristic size of relief. (landscape characteristics and geomorphology) by Douglas W. Burbank.
Appears in Nature 1992, v359, n6395, Oct 8, p483(2)
Descript. ill. (graph)
Note How landscape characteristics may relate to geomorphology, geophysics and related disciplines was the dominant subject of a Tectonics and Topography conference sponsored by the American Geophysical Union and held from Aug 30 to Sep 4, 1992, at Snowbird, UT. Landscape characteristics include elevation, relief, slope, drainage density and others. The quantitative analysis of these characteristics for the Himalaya Mountains, the Andes Mountains and other regions is likely to improve understanding of underlying geological structures.

Corcoran, Ann.

Title This land is our land: and we'll protect it better than government will. (private-property rights) by Ann Corcoran.

Appears in Policy Review 1993, n63, Wntr, p72(4)

Descript. ill. (photograph)

Note The National Park Service's plan in the 1980s to expand the borders of the Antietam Battlefield National Park in Maryland involved encroachment onto nearby farm land that was privately owned. Various land owners organized to battle the Park Service, a fight that is still active in 1993. The property rights movement is a reaction to increased government efforts to control development in areas where there are national preserves, parks and recreation areas. Once private land comes under the control of the government, owners cannot make changes without government permission.

Gale, Dennis E.

Title The impacts of historic district designation: planning and policy implications. by Dennis E. Gale.
Appears in Journal of the American Planning Association 1991, v57, n3, Summer, p325(16)
Descript. ill. (photograph, map, table)
Note Includes: The study areas in Washington, DC. (map); Characteristics of the study areas. (table). The designation of historic districts in residential neighborhoods has grown in popularity in the United States over the past two decades. Many planners have embraced designation policies as tools in the management of neighborhood preservation and revitalization. However, opposition has arisen in some cases based on the assertion that official designation could accelerate property values, thus increasing tax liabilities and rents and leading to rising displacement of low-income and elderly households. Existing research provides only a few insights into this issue. An analysis of residential historic district designation in Washington, DC, finds little support for the displacement threat. Further research is necessary on the timing of designation and the intervening effects of the federal historic preservation tax credit. (Reprinted by permission of the publisher.)

Godschalk, David R.

Title Negotiating intergovernmental development policy conflicts: practice-based guidelines. (Planner's Notebook) by David R. Godschalk.
Appears in Journal of the American Planning Association 1992, v58, n3, Summer, p368(11)
Descript. ill. (table, chart, map)
Note Neighboring governments must increasingly resolve planning and development conflicts that cross their boundaries. The alternative dispute resolution literature advises that mature conflict settlement requires convening an ad hoc group of all affected parties assisted by a third party mediator. This article makes the case for building broader conflict management approaches based on continuing institutional arrangements, involving forums and techniques keyed to the intensity of disagreement. This allows directly responsible government officials to resolve inter-governmental conflicts without always involving a neutral third party, procedural certainty for conflict management practice, and the development of a cadre of officials experienced in negotiation, who can minimize adversarial and positional bargaining. The approach is based on experience from four intergovernmental growth management cases. (Reprinted by permission of the publisher.)

Hedren, Paul L.

Title Why we reconstructed Fort Union. (19th-century fort in North Dakota) by Paul L. Hedren.

Appears in The Western Historical Quarterly 1992, v23, n3, August, p349(6)

Note The National Park Service's (NPS) successful partial reconstruction of Fort Union in North Dakota vindicates the policy of rebuilding such historic sites. Fort Union, located where the Yellowstone river flows into the Missouri river, was a center for the 19th-century fur trade with the Indians. In 1966 Congress gave the NPS responsibility for the Fort Union Trading Post National Historic Site. Since little of the original buildings remained, the NPS chose to rebuild them despite the harsh denunciations of preservationists. The completion of the project in 1991 justified the NPS's policy.

Title Environmental states of mind. (includes related articles) (Guest Editorial) by John P. McCullough.

Appears in CHEMTECH 1992, v22, n5, May, p269(5)

Note Three streams of thought are discussed in how America treats its environment. The first is preservation which teaches that nature should be left alone without any disturbance or conflict from mankind. Second is exploitation which emphasizes that man is the master of his universe and therefore, can manipulate nature to an unbridled degree in the name of progress and development. Lastly there is conservation, which favors the harmonious and creative relationship between man and nature. Conservation is favored among the three since it is deemed to lead to the wisest and most efficient use of natural resources.

Title The carbohydrate economy. (plant matter-derived consumer products making headway in the 1990s) by David Morris and Irshad Ahmed.

Appears in Earth Island Journal 1993, v8, n1, Wntr, p36(3)

Descript. ill. (photograph, table)

Note The use of carbohydrates from plant matter may be the effective way at promoting environmental protection while successfully sustaining rural economies. A carbohydrate economy, one that manufactures plant matter-derived consumer products, has again become the trend for the 1990s. Plant matter has made its way to various industry types ranging from petroleum chemicals to textiles. Economists and environmentalists alike believe that policies at promoting a carbohydrate economy will be a step further at achieving sustainable development.

Title The Stonehenge experience. (designs for tourist facilities near historic site) by Catherine Slessor.
Appears in The Architectural Review 1993, v192, n1152, Feb, p4(2)
Descript. ill. (photograph)
Note English Heritage invited six British architects to design tourist buildings for the Stonehenge historic site. The monument is currently surrounded by unsightly fences and inadequate visitor facilities. All designs placed buildings at a significant distance from the monument and favored buried facilities with above-ground automobile parking. One of the proposals, submitted by Edward Cullinan Architects, features a wedge-shaped building set into a hillside. The building also contained a rooftop promenade that afforded views of the surrounding landscape.

Soule, Michael E.

Title Land use planning and wildlife maintenance: guidelines for conserving wildlife in an urban landscape. by Michael E. Soule.

Appears in Journal of the American Planning Association 1991, v57, n3, Summer, p313(11)

Descript. ill. (chart, map, table)

Note Includes: Relationship between edge effects and the amount of interior habitat. (chart); Location of the study sites in the vicinity of San Diego, California. (map); Biogeographic data vicinity of San Diego, California. (map); Biogeographic data used in the regression analyses. (table) The study of plants and animals on islands, both natural and artificial, has produced a body of generalizations immediately useful to land use planners concerned with minimizing the impacts of habitat destruction on the environment. A case study of 37 isolated chaparral fragments in San Diego, California, demonstrates the consequences of habitat fragmentation, including rapid and predictable extinctions of native birds in isolated canyons. This study and others can be used to generate planning guidelines for the prevention of such disappearances. Among the most important measures that can be taken are consolidation of open space set-asides and the provision of corridors linking habitat patches. Corridors can mitigate some of the negative effects of development on wildlife, especially where they facilitate the movement of large predators. (Reprinted by permission of the publisher.)

Title Takings and givings: toward common ground on property rights. (Commentary) by Edward Thompson Jr.

Appears in Journal of Soil and Water Conservation 1992, v47, n5, Sept-Oct, p376(2)

Note The debate over private property rights versus governmental regulation of land use must serve to reorient the way landowners are compensated as well as the way land is treated. Proponents of increased private property rights want to lessen governmental regulation of land use while environmentalists and government officials fear that once private property rights are increased regulation would become too expensive. To solve this conflict government spending must be separated from land abuse and focused instead on effective environmental conservation.

Wood, J.S.

Title A world we have gained: house, common and village in New England. (includes bibliography) by J.S. Wood and M. Steinitz.

Appears in Journal of Historical Geography 1992, v18, n1, Jan, p105(16)

Note New England landscape and architecture in the 19th century, reproduced the Puritan village as a means of promoting the Puritan work ethic which was considered intellectually desirable. Landscaping was romantically based on the typical house, common and village tradition. The colonialist revival movement restructured architecture to reflect a historical tradition that lent credence to patriotism.

Zuckerman, Seth.

Title Across the great divide. (organic farming) by Seth Zuckerman.

Appears in Sierra 1992, v77, n5, Sept-Oct, p20(2)

Note Rules for state certification of organic produce do not necessarily promote environmental responsibility. Organic pesticides can be more harmful than synthetic ones, and the search for organic fertilizer can affect wildlife and the landscape. Some organic growers favor agronomic responsibility over rigid separation of natural and synthetic materials.

Zuckerman, Seth.

Title New Forestry, new hype? (includes related article on logging in Collins Almanor Forest) by Seth Zuckerman.
Appears in Sierra 1992, v77, n2, March-April, p40(7)
Descript. ill. (photograph)
Note New Forestry is a policy of the US Forest Service instituted in 1990 to preserve both healthy forests and an adequate wood supply. The failure of a logging plan for the Shasta Costa area of Siskiyou National Forest illustrates the policy's deficiencies.
